Project Development Phase

Data visualizations

Initial Data Loading Steps :

- Open Tableau Public
- Connect to Data , Click “Text File” (if CSV) (or) Click “Microsoft Excel” (if Excel file)
- Browse and select your Heritage Treasures dataset file .
- Click Open.
- The dataset will appear in the Data Source page.
- Verify column names and data types.

Dataset Preprocessing Steps :

Rename columns :

- Right click on column states_ names_en , Select Rename.
- Change states_ names_en → states.
- Rename Regions_en → Regions.
- Rename Justification_en → Justification

Hide Unnecessary Fields :

- Right-click on “Red bis” and select Hide.
- Right-click on “Justification” and select Hide.
- These fields were hidden as they were not required for analysis.

Assign Geographic Roles :

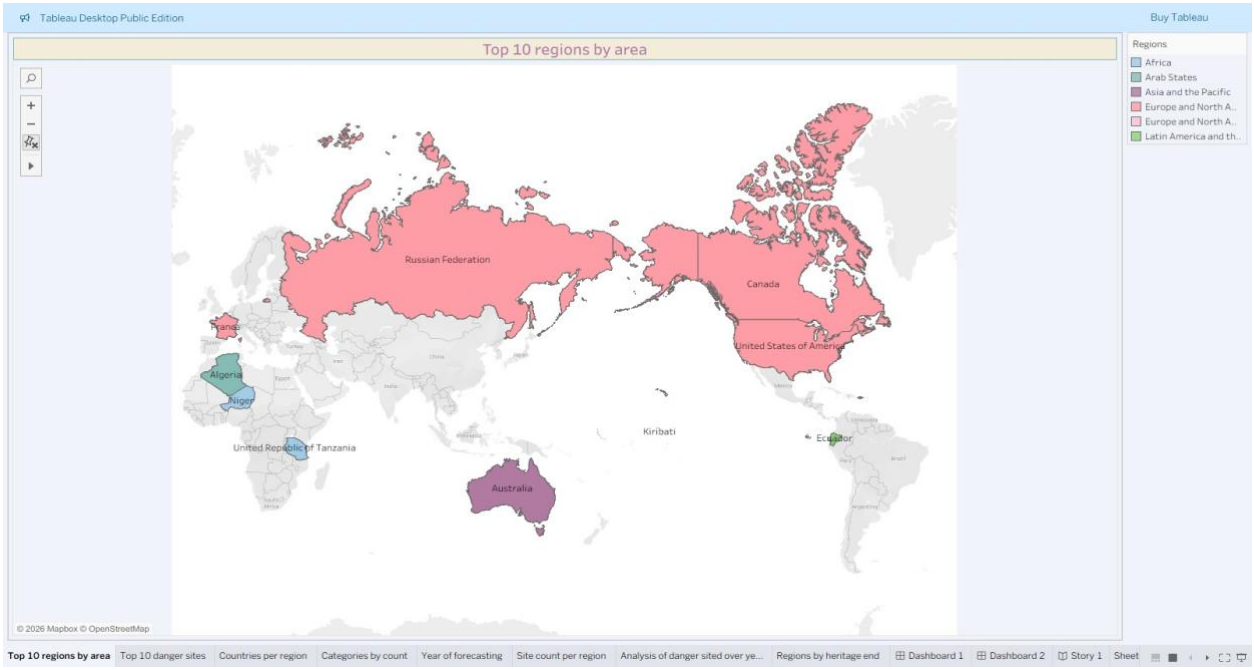
- Click on the dropdown of States.
- Select Geographic Role → Country/Region.
- Similarly, assign Geographic Role → Country/Region to Regions.

Modify Data Type :

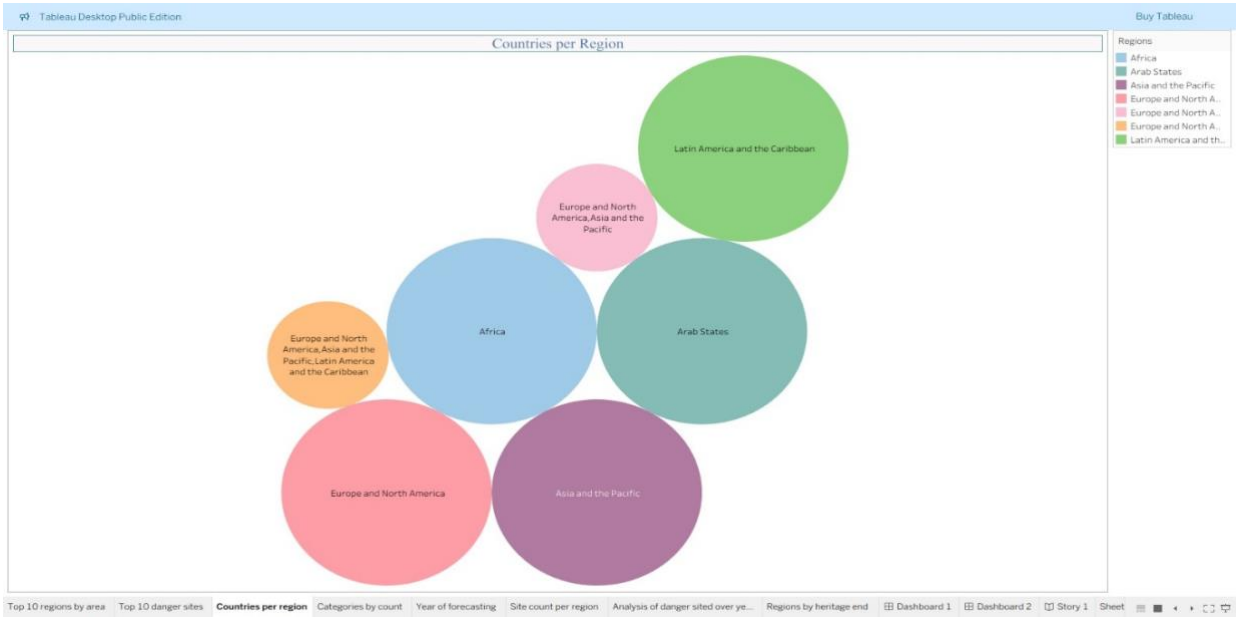
- Change the data type of “Date end” to Date. Ensure the correct date format is applied.

Visualizations :

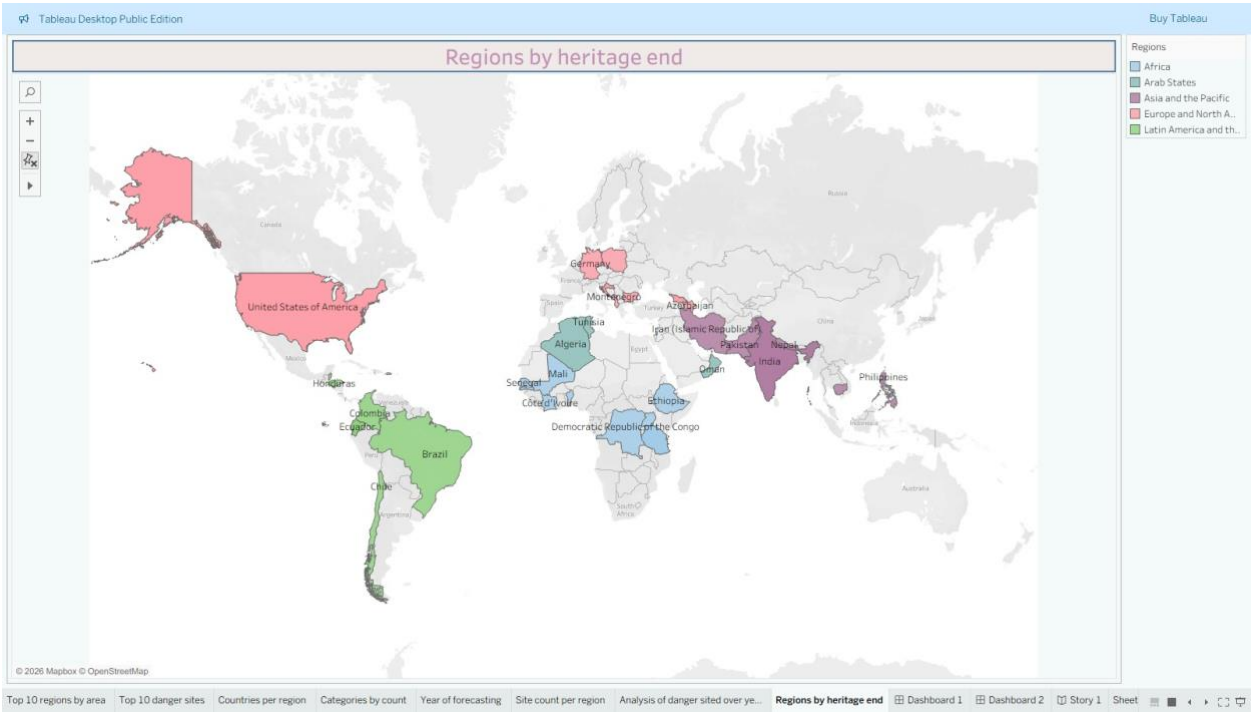
1. Top 10 regions by area



2. Countries per region

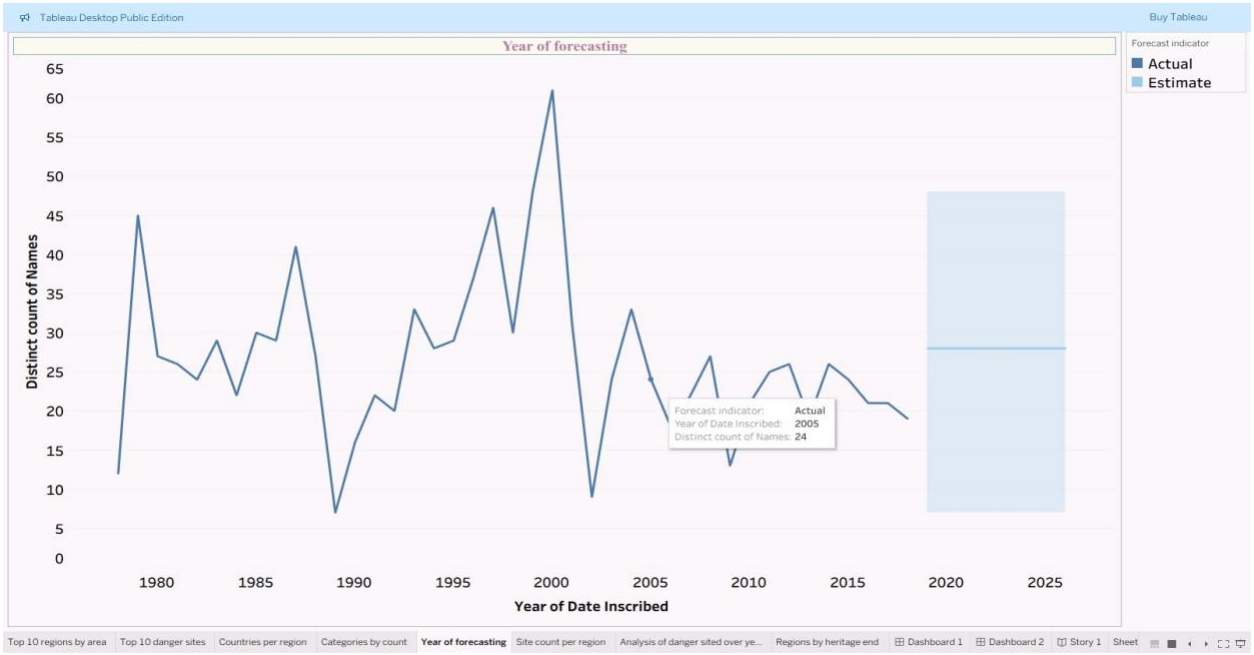


3. Regions by heritage ended

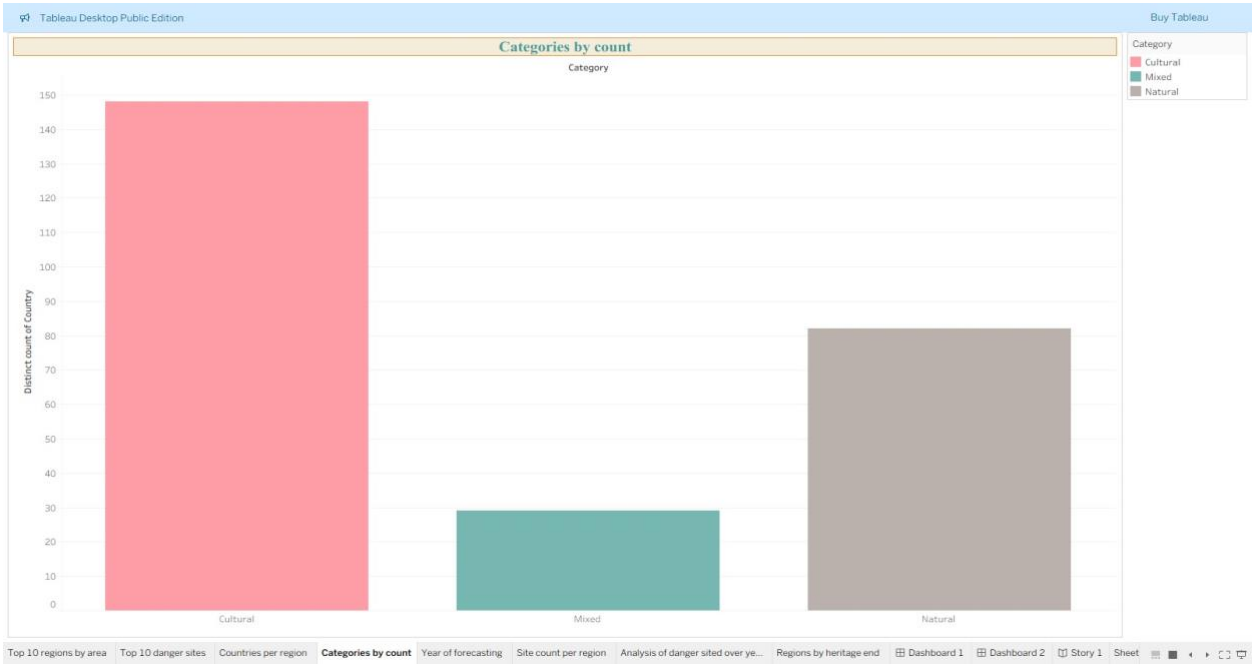


4. Top 10 danger sites

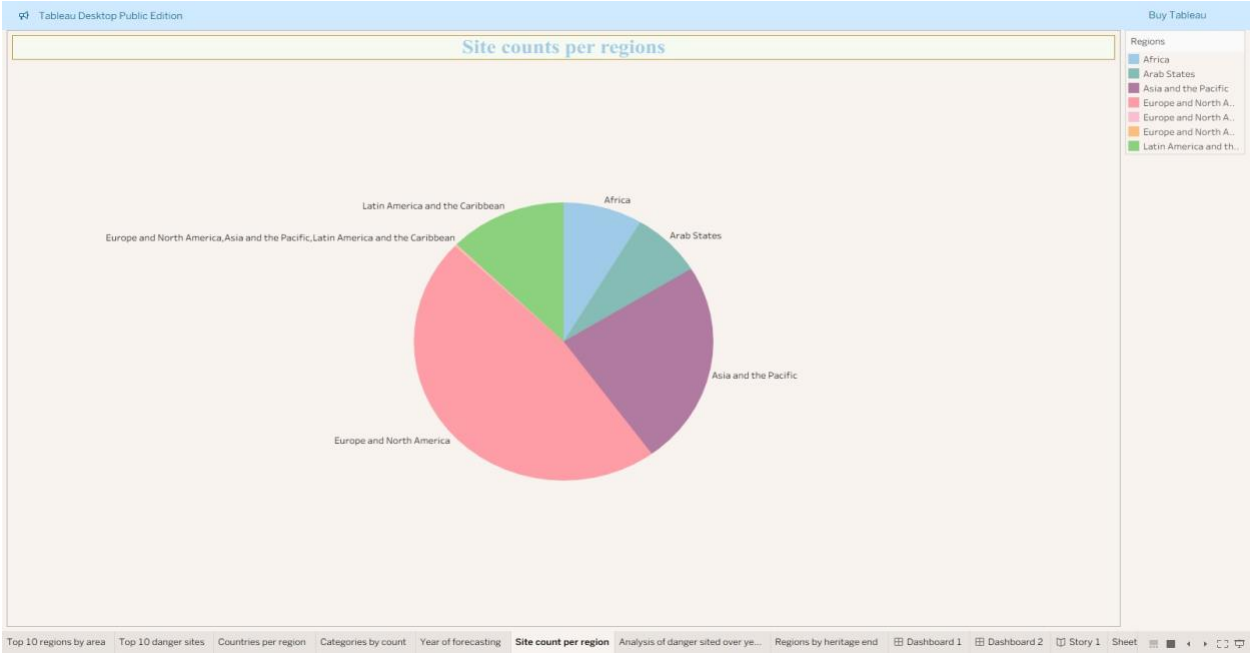
5. Year forecasting of heritages

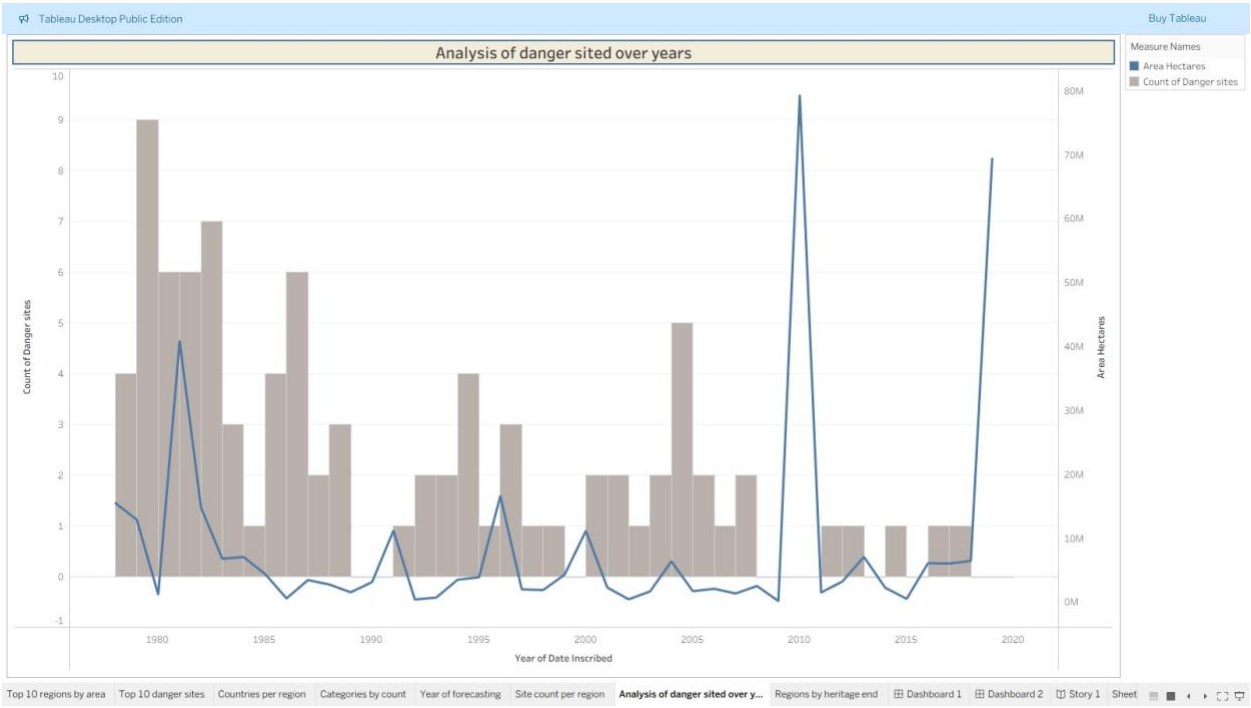


6. Categories by sites count



7. Site count per region





8. Analysis of danger sites
